

Post Module API

This module handles all **Post-related operations** including:

- Create Post (with media)
- Get All Posts (Feed)
- Get Single Post
- Update Post
- Delete Post

Features

- Create posts with text, images, and videos
- Multiple media upload
- Fetch posts with full relations
- Update own posts
- Delete posts with cleanup

Includes:

- User info (name, username, avatar)
- Media (images/videos)
- Likes (with user)
- Comments (with user + replies)
- Shares (with user)

Post Structure

```
{
  "id": "uuid",
  "userId": "uuid",
  "caption": "Post text",
  "likeCount": 0,
  "commentCount": 0,
  "shareCount": 0,
  "createdAt": "date",
  "updatedAt": "date"
}
```

API RESPONSE FORMAT (IMPORTANT)

All APIs follow this structure:

```
{
  "success": true,
  "message": "Request successful",
  "data": {}
}
```

⚠ Frontend Usage

```
const res = await axios.get("/api/posts");

// 📄 Access data
const posts = res.data.data;
```

📄 BASE URL

```
/api/posts
```

📄 API ENDPOINTS

📄 1. Create Post

```
POST /api/posts
```

📄 Headers

```
Authorization: Bearer TOKEN
Content-Type: multipart/form-data
```

📄 Body (form-data)

Key	Value
caption	Post text
media	file(s)

📄 You can upload multiple files

📄 Response

```
{
  "success": true,
  "message": "Post created successfully",
  "data": {
    "id": "postId",
    "caption": "Hello world"
  }
}
```

📄 2. Get All Posts (Feed)

```
GET /api/posts
```

📄 Response

```
{
  "success": true,
  "data": [
    {
      "id": "post1",
      "caption": "Hello world",
      "user": {
        "id": "user1",
        "name": "Yugesh",
        "username": "yugesh123",
        "avatar": "avatar.jpg"
      },
      "media": [
        {
          "id": "media1",
          "url": "/uploads/image.jpg",
          "type": "image"
        }
      ],
      "likes": [
        {
          "user": {
            "id": "user2",
            "name": "Ram"
          }
        }
      ],
      "comments": [
        {
          "id": "comment1",
          "content": "Nice post",
          "user": {
            "id": "user3",
            "name": "Shyam"
          }
        }
      ],
      "shares": [
        {
          "id": "share1",
          "user": {
            "id": "user4",
            "name": "Hari"
          }
        }
      ]
    }
  ]
}
```

🔗 3. Get Single Post

```
GET /api/posts/:id
```

🔗 Response

```
{
  "success": true,
  "data": {
    "id": "post1",
    "caption": "Hello world",
    "user": {},
    "media": [],
    "likes": [],
    "comments": [],
    "shares": []
  }
}
```

🔖 4. Update Post

```
PUT /api/posts/:id
```

🔖 Headers

```
Authorization: Bearer TOKEN
```

🔖 Body

```
{
  "caption": "Updated caption"
}
```

🔖 Rules

- 🔖 Only post owner can update

🔖 Response

```
{
  "success": true,
  "message": "Post updated successfully",
  "data": {
    "id": "post1",
    "caption": "Updated caption"
  }
}
```

🔖 5. Delete Post

```
DELETE /api/posts/:id
```

🔖 Headers

Authorization: Bearer TOKEN

Rules

- Only owner can delete

Deletes Automatically

- Media
- Likes
- Comments
- Shares

Response

```
{
  "success": true,
  "message": "Post deleted successfully",
  "data": null
}
```

Media Handling

- Stored in /uploads
- Supports:
 - Images
 - Videos
- Multiple uploads supported

Authorization Rules

Action	Requirement
Create Post	Logged in
Update Post	Owner only
Delete Post	Owner only

Example Flow

Create → Fetch → Update → Delete

```
POST /api/posts
GET /api/posts
GET /api/posts/:id
PUT /api/posts/:id
DELETE /api/posts/:id
```

Summary

This Post Module provides:

- ☑ Full CRUD operations
- ☑ Media upload support
- ☑ Relationship handling (user, media, likes, comments, shares)
- ☑ Clean API structure
- ☑ Production-ready design
